SUMMARY

Computer Science graduate with hands-on experience in cloud infrastructure, CI/CD automation, containerization, and backend development. Skilled in AWS, Docker, Kubernetes, GitHub Actions, Linux, and RESTful APIs with experience deploying scalable applications and automating development workflows. Passionate about DevOps, cloud engineering, infrastructure automation, and site reliability.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, IAM, CloudWatch, VPC, S3, Auto Scaling), Docker, Kubernetes, Linux Administration, Render, Terraform (Learning)

DevOps & Automation: CI/CD Pipelines, GitHub Actions, Jenkins, Infrastructure Automation, Deployment Automation, Docker Compose

Programming & Scripting: Python, JavaScript, Bash, Java

Backend Development: Node.js, REST APIs

Databases: MongoDB, SQL

Monitoring & Observability: Log Monitoring, Application Monitoring, Troubleshooting

Tools: Git, GitHub, Jenkins

Core Concepts: Distributed Systems, Data Structures, Operating Systems, Networking Fundamentals, Software Development Lifecycle (SDLC), Containerization, Cloud Computing

EXPERIENCE / PROJECTS

DevOps Engineering Intern

Remote | Jun 2023 – Nov 2023

Savantis Solutions

- Designed and Implemented a complete CI/CD pipeline for a Python-based web application using Jenkins, Git, and Docker.
- Developed Jenkins pipelines (Jenkinsfile) to automate build, test, and deployment workflows.
- Created custom Docker images and managed them via Docker Hub. Configured GitHub webhooks to trigger Jenkins jobs automatically on push events.
- Monitored application logs and container health using basic Bash scripts and Linux jobs.
- Deployed the containerized application on a local virtual machine simulating a production environment.
- Documented all steps in GitHub and followed Git best practices using feature branches and pull requests.

Containerized Task Manager API with CI/CD & AWS Deployment | [GitHub](#)

- Developed and deployed a RESTful Task Manager API using Node.js, Express.js, and MongoDB
- Containerized the application using Docker and managed multi-container services with Docker Compose
- Implemented CI/CD workflows using GitHub Actions for automated build, testing, and deployment pipelines
- Deployed REST API on cloud platforms including AWS EC2 and Render with environment-based configuration and MongoDB Atlas
- Configured CRUD API endpoints and validated functionality using Postman
- Implemented structured logging and error handling to improve application reliability
- Managed source control and deployment workflows using Git and GitHub

Kubernetes Deployment for Containerized Task Manager

- Deployed Dockerized Node.js and MongoDB application using Kubernetes deployments and services
- Configured Kubernetes networking and service discovery between application components
- Validated application availability through port-forwarding and API testing in local Kubernetes clusters
- Improved deployment consistency using container orchestration principles

OPEN SOURCE CONTRIBUTIONS

- Contributed to open-source projects involving Jenkins CI/CD, GitHub Actions, Docker, and Docker Compose.
- Implemented automated CI pipelines, containerization support, and deployment workflow improvements.
- Collaborated with project maintainers through pull requests and Git-based development workflows.

EDUCATION

M.S. in Computer Science & Engineering

California State University, Dominguez Hills | May 2026

CERTIFICATIONS

AWS Cloud Quest: Cloud Practitioner

Linux Essentials — Cisco Networking Academy

Azure AI fundamentals - Microsoft

AWS ML Internship

AWS Cloud Foundation Internship

Cisco Networking Essentials

Cisco Packet Tracer

Cybersecurity Essentials
